

WORKSHOP: Observations and the management of Water, Energy, and Food resources in the Basin of the Red River of the North

October 30 (PM) to November 1 (AM), 2023

**Hosted by the North Dakota Center for Water Research at the
University of North Dakota, Grand Forks, ND**

The Purpose of the Workshop:

The workshop will explore the role of Earth observation data and Earth system information and predictions in assisting producers, planners and managers of food, energy and water resources. It features presentations from NASA and other government experts, university researchers, and federal, state and provincial program managers and service providers as well as discussions of the information needs of farmers, water managers and energy innovators in the Red River Basin.

Who should come:

If you use data in your planning or undertake actions related to the production of food, the delivery of clean water and the provision of different types of energy for society then you are invited to join this workshop, preferably in person, but also on Zoom. There is no registration fee for this workshop, but spaces are limited and available on “a first come, first served” basis.

One hundred tickets are available at the following Eventbrite website for registration for in-person and remote participation for this workshop:
